

Legislative Assembly Winnipeg, Manitoba

June 14, 2010

Members of the Social & Economic Development Committee,

Please accept this written submission as the position of the Canadian Taxpayers Federation on *Bill 5, THE COTTAGE PROPERTY TAX INCREASE DEFERRAL ACT*.

To begin, we accept the government's efforts as well-intentioned, but Bill 5 does nothing to address a very serious and growing problem – rising school taxes and skyrocketing education spending.

By allowing cottage owners to defer tax increases, all Bill 5 will do is delay the inevitable and put the government in the inappropriate position of playing financier.

Instead, what the government needs to do is move forward with significant reform.

If you sit down and pour through the Province of Manitoba's Enrolment Reports, you will notice that K-12 enrolment dropped from 199,419 students in 1999/00 to 179,802 students in 2009/10 – a 10% decrease.

If you then look at annual K-12 expenditures in provincial FRAME reports, you will see spending has risen from \$1.201 billion in 1999/00 to \$1.816 billion in 2008/09 – a 51% increase.

Enrolment down 10%, costs up by 51%. Clearly, this is unsustainable.

Make no mistake, if our education system's outcomes were top of the class in Canada, it would be easier to justify the expenditures, but they don't appear to be.

If you look back to Statistics Canada data from 2001/02, you will see that Manitoba had the second-highest per pupil spending levels in Canada, but was last in the country for graduation rates. For 2007/08, the most recent year that data is available, we again had the lowest graduation rates and the second-highest per pupil spending levels. In fact, our graduation rates are down 2.2% from 2004/05.

If you review the most recent international test scores, the 2006 PISA tests, you will see a similar story. Overall, the 2006 PISA report on math, science and reading, noted Manitoba performed below the national average.

Despite throwing boatloads of money at the system, we're not getting bang for our buck. The spending binge cannot continue as taxpayers are tapped out.

Cont'd...

Winnipeg Office

212-428 Portage Ave Winnipeg, MB R3C 0E2 (204) 982-2150 Fax (204) 982-2154 Head Office 105-438 Victoria Ave E Regina, SK S4N 0N7 1-800-667-7933 (306) 352-7203 Unfortunately, the bill before the house does nothing to address the spending problem. It is the equivalent of someone fixing a slightly crooked picture on a wall while a white elephant sits awkwardly in the middle of the same room.

What we need is fundamental reform, not tinkering around the edges. After all, our funding model for the public school system is archaic and the system's costs are out of control.

Despite the decline in enrolment, annual spending has now increased by more than \$\frac{\$328 \text{ million above the rate}}{\text{of inflation}}\$ since 1999/00.

When one considers that \$715 million will be raised in school taxes this year, by merely controlling costs, the province could have reduced the average school tax bill by 46%.

For the other half of the solution, the government needs to make school tax relief a priority. After all, school taxes are an archaic form of taxation that should be phased out. Instead, school funding should come from general revenues.

As you know, school taxes do not take into account one's ability to pay. If a taxpayer loses his or her job, they stop paying income taxes.

However, unlike income taxes, the school tax bill will still be waiting there for those that have been laid off.

The same can said for businesses. Income insensitive school taxes can be the nail in the coffin for a company on the brink of bankruptcy or the final barrier that prevents entrepreneurs from pursuing ventures in this province.

Clearly, just because someone owns a house, cottage or business property does not mean they can afford to pay their school tax bill.

We recognize that school taxes cannot be eliminated over night. That is why we called for a multi-year plan to phase out school taxes. The first step is to make the issue a priority and develop that plan.

If the archaic and unfair aspects of school taxes are not enough for the government to act, then I encourage all parties to consider the upcoming situation.

Over the next decade, more and more baby boomers will be retiring. As the government knows, many of them do not have pensions. In fact, according to Statistics Canada, more than two thirds of Manitobans do not have private pension plans; they will have to rely on fixed income, government assistance programs to make ends meet.

While living on fixed incomes, Manitobans will not be able to afford rising school tax bills.

In conclusion, we hope you withdraw this legislation and focus on broader education reform to address the problem.

Sincerely.

Colin Craig

Prairie Director - Canadian Taxpayers Federation

FRAME REPORT 2009/10 BUDGET

PROVINCIAL CONTRIBUTION TO PUBLIC EDUCATION

The total cost of public education in Manitoba includes direct expenditures for the operation of schools (e. g. educator and administrator salaries, teaching supplies, pupil transportation, utilities, building maintenance) and capital expenditures for school building construction and major building repairs and renovations. Also included are provincial expenditures for pensions for retired teachers and the provincial education tax credit programs for homeowners, tenants and farmers which results in reduced property tax bills. The total provincial contribution to public education accounts for 75.1% of the total of these expenditures.

2009/2010 (\$ millions)

	Total Expenditure on Public Education	Provincial Contribution	Provincial Contribution as %
1 FRAME Operating Fund	\$1,816.1	\$1,159.4	63.8%
2 School division capital (transfers to capital fund)	16.0		-
3 Provincial Capital Grant Funding and Other	75.2	75.2	100.0%

Measuring up: Canadian Results of the OECD PISA Study

The Performance of Canada's Youth in Science, Reading and Mathematics

2006 First Results for Canadians Aged 15

Measuring up: Canadian results of the OECD PISA Study

The Performance of Canada's Youth in Science, Reading and Mathematics

2006 First Results for Canadians Aged 15

Highlights

Canadian 15-year-olds perform well in science in international comparison

Among the 57 participating countries, students from only Hong Kong-China and Finland outperformed Canadian 15-year-olds on the combined science scale. While all provinces performed at or above the OECD average on the combined science scale, there were

some notable provincial differences. The average performance of students in Alberta was significantly above the Canadian average. Quebec, Ontario and British Columbia performed about the same as the Canadian average. Students in Newfoundland and Labrador, Prince

In the science sub-domains of 'identifying scientific issues' and 'using scientific evidence' (see text box What is PISA for definitions), only Finland had higher average scores than Canada. In the sub-domain of 'explaining phenomena scientifically' only students in Finland, Hong Kong-China, Chinese Taipei and Estonia outperformed Canadian students.

What is PISA?

The Programme for International Student Assessment (PISA) was initiated by the member countries of the Organisation for Economic Co-operation and Development (OECD) to provide policy-oriented international indicators of the skills and knowledge of 15-year-old students. It assesses youth outcomes in three domains – reading, mathematics and science – focusing on what students can do with what they have learned in school, at home and in the community.

PISA was first implemented in 2000 and is repeated every three years with each cycle providing detailed assessment in one of the three domains and summary assessments in the other two. In PISA 2006, science was the major assessment domain and it included three competency areas also referred to as sub-domains:

- 'Identifying scientific issues' involves recognizing issues that are possible to investigate scientifically, identifying keywords to search for scientific information and recognizing the key features of a scientific investigation.
- 'Explaining phenomena scientifically' involves applying knowledge of science in a given situation, describing
 or interpreting phenomena scientifically and predicting changes and identifying appropriate descriptions,
 explanations and predictions.
- 'Using scientific evidence' involves interpreting scientific evidence and making and communicating conclusions, identifying the assumptions, evidence and reasoning behind conclusions, and reflecting on the societal implications of science and technological developments.

In addition to science, reading and mathematics were included in PISA 2006 as minor domains.

Fifty-seven countries¹ participated in PISA 2006, including all 30 OECD countries. In Canada, about 22,000 15-year-old students from around 1,000 schools participated. A large sample was drawn in Canada so that information could be provided at both the Canadian and provincial levels².

The PISA 2006 included a direct assessment of students' skills, a student questionnaire and a school questionnaire completed by principals. The school and student questionnaire were used to collect background and contextual information related to student performance.

No data were collected in the three territories or on First Nations schools.

Three Special Administrative Regions (Chinese Taipei, Hong Kong-China and Macao-China) are included among the 57 countries.

Canada, provinces and territories, 2001/2002 to 2007/2008 **Graduation Rates**

0 true zero or a value rounded to zero

1. The number of graduates is as of the end of a school year while the population estimates are as of July 1 of the corresponding school year. Late graduates are included in the calculations while graduates from private schools, are not. For this reason, this methodology underestimates the "final" graduation rate and should not be used to infer dropout

2. Data exclude publicly funded hospital and provincial schools, care, treatment and correctional facilities.

4. Historical revisions have been made to this table to exclude students who graduated from Adult Learning Centres registered under the Adult Learning Centres Act, effective 3. The graduation rate in the final year is slightly understated because some schools have not submitted course information before the data collection cutoff for this report.

July 2001. This has the effect of understating the number of graduates and the associated graduation rate for Manitoba as compared to other provinces and jurisdictions and should not be considered directly comparable. (In 2007/2008, there were 1,174 Adult Learning Centre graduates who were excluded from the total graduates figure).
